Investing involves risks which may lead to losses, including loss of principal. Different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will be profitable. BIAS does not make any representation that any of its investments on behalf of clients, or any other investments will or are likely to achieve returns similar to those shown in any performance results presented.

Past performance is not a predictor of future results. It should not be assumed that any information discussed herein will prove to be profitable or that decisions in the future will be profitable or provide similar results. Benchmark returns include reinvestment of capital gains and dividends, if any, but do not reflect any fees or expenses. Any reference to a market index is included for illustrative purposes only, as it is not possible to directly invest in an index. Indices are unmanaged vehicles that serve as market indicators and do not account for the deduction of management fees or transaction costs generally associated with investable products, which otherwise have the effect of reducing the performance of an actual investment portfolio.

Complete Investment Advisory and transaction fees schedules are available upon request. The S&P 500 Index is an index of large cap companies. Returns on all indexes are calculated from the dates set forth and include dividend reinvestments. These indexes are unmanaged and do not reflect any transaction costs. Investors cannot invest directly in an index.

Proposals and hypothetical presentations are for illustrative purposes only. Investors should consider this report as only a single factor in making their investment decision.

Any discussion of tax matters contained within this communication should not be used for the purpose of avoiding U.S. tax related penalties or promoting, marketing, or recommending to another party any transaction or matter addressed herein. Beacon Trust does not provide legal advice.

Calculation methodologies are available upon request. #227837 For one on one presentation only.

### Market Performance

Market Scorecard:	04/30/2024	YTD Price Change
Dow Jones Industrial Average	37,815.92	0.34%
S&P 500 Index	5,035.69	5.57%
NASDAQ Composite	15,657.82	4.31%
Russell 1000 Growth Index	3,248.65	6.45%
Russell 1000 Value Index	1,688.32	3.61%
Russell 2000 Small Cap Index	1,973.91	-2.62%%
MSCI EAFE Index	2,280.53	1.98%
US 10 Year Treasury Yield	4.68%	80 basis points
WTI Crude Oil	\$81.93	14.35%
Gold \$/Oz.	\$2,286.25	10.82%

### **Beacon Investment Selection**

- Our philosophy relative to investment selection is to focus on quality companies and funds with a long-term mindset.
- "Quality" from our standpoint, precipitates a focus on companies and funds that invest in companies with above average profitability, free cash flow, as well as strong balance sheets.
- We pair that focus with a focus on companies that we believe are well managed, well positioned within their industry, and have exposure to long-term growth drivers with AI being a prominent example of that.
- Long-term and quality focus keeps us away from chasing returns or investing in companies as a result of hype around a particular secular trend, that don't have a track record of proven success.

### AI Layers

- A good way to think about AI and the potential impacts and opportunities it portends, is to start by looking at the broader layers of AI.
- The first layer being the picks and shovels so to speak, which are the hardware companies that make the high performance GPU's/chips that are used to power generative AI large language models and AI functionality in general.
- These companies are the highest up in the revenue funnel, in terms of having already directly benefited from the proliferation of AI, and are expected to continue to do so.
  - Examples being NVDA and AMD
  - Exposure through ownership of individual stocks, as well as funds.
- Also need the software platform to run the hardware and to use for the development and training of AI models- NVDA's Cuda software platform being an example.

# AI Layers Cont'd.

- The second major layer being the middle-men which are little bit further down the revenue funnel as far as benefiting from AI.
- Includes OEM's (original equipment manufacturers) that assemble the GPU's and motherboards and create installable servers that can be sent as a final package to end users.
- Also includes the high-performance memory providers.

## AI Layers Cont'd.

- In addition, need to build out the AI networking infrastructure for large cloud companies-Nvidia with the acquisition of Mellanox is also a player here.
- Also need the energy and storage infrastructure for servers/data centers.
- The last major layer are the end users that utilize AI for specific use cases to enhance productivity, efficiency, and existing products/services, or to launch new ones.
- The last major layer are the end users that utilize AI for specific use cases to enhance productivity, efficiency, and existing products/services, or to launch new ones.

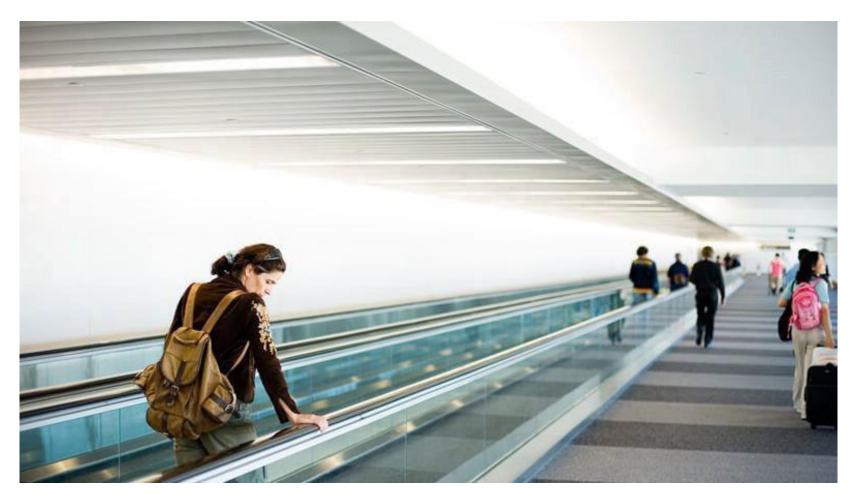

## Use Cases/Opportunities

- MSFT-Open AI/Chat GPT, and Co-pilot- recent deal with Coca-Cola to use AI and cloud computing services.
- ADBE-Firefly integration to Photoshop, integration of Gen AI tools into Premier
   Pro video editing software, Acrobat AI assistant monthly subscriptions.
- Programmatic Advertising/Targeted Advertising-Google, Trade Desk, and Disney to benefit.
- Cyber-security companies-tailwind from increased security threats as a result of the proliferation of AI, as well as from the utilization of AI themselves relative to continuing to enhance security detection and mediation products.
- Palo Alto best in breed cyber-security company benefiting from these dynamicsnew strategy to consolidate more users to its platform.

#### Jamie Dimon on AI

### Dimon Likens Al's Transformational Impact to Steam Engine

- JPMorgan CEO says Al could 'augment virtually every job'
- Dimon discusses regulation, proxy advisers in annual letter

JPMorgan Chase & Co. Chief Executive Officer Jamie Dimon said artificial intelligence may be the biggest issue his bank is grappling with, likened its potential impact to that of the steam engine and said the technology could "augment virtually every job."

The CEO devoted a chunk of his annual <u>shareholder letter</u> to the importance of AI for the Wall Street giant's business and for society at large. The bank has identified more than 400 use cases for the technology across marketing, fraud and risk, amassed thousands of AI experts and data scientists and begun exploring deploying generative AI, Dimon said.

"We are completely convinced the consequences will be extraordinary and possibly as transformational as some of the major technological inventions of the past several hundred years," Dimon said in the letter. "Think the printing press, the steam engine, electricity, computing and the Internet, among others."
